

MATEMATYKA

OBLICZ WYNIK OSTATNIEGO DZIAŁANIA

The image shows four rows of math problems on a yellow background. Each row uses different cartoon animals as variables in arithmetic operations.

- Row 1: Two yellow chicks multiplied together, plus 1, equals 17.
$$\text{chick} \times \text{chick} + 1 = 17$$
- Row 2: A bee multiplied by a chick, multiplied by another bee, equals 36.
$$\text{bee} \times \text{chick} \times \text{bee} = 36$$
- Row 3: A bee multiplied by a chick, multiplied by a monkey, equals 72.
$$\text{bee} \times \text{chick} \times \text{monkey} = 72$$
- Row 4: A monkey minus a chick, multiplied by a bee, equals a question mark.
$$\text{monkey} - \text{chick} \times \text{bee} = ?$$
